Contents

Chapter 1. Introduction	1
1. Topological aspects of Hamiltonian group actions	1
2. Hamiltonian cobordism	4
3. The linearization theorem and non-compact cobordisms	5
4. Abstract moment maps and non-degeneracy	7
5. The quantum linearization theorem and its applications	8
6. Acknowledgements	10
Part 1. Cobordism	13
Chapter 2. Hamiltonian cobordism	15
1. Hamiltonian group actions	15
2. Hamiltonian geometry	21
3. Compact Hamiltonian cobordisms	24
4. Proper Hamiltonian cobordisms	27
5. Hamiltonian complex cobordisms	29
Chapter 3. Abstract moment maps	31
1. Abstract moment maps: definitions and examples	31
2. Proper abstract moment maps	33
3. Cobordism	34
4. First examples of proper cobordisms	37
5. Cobordisms of surfaces	39
6. Cobordisms of linear actions	42
Chapter 4. The linearization theorem	45
1. The simplest case of the linearization theorem	45
2. The Hamiltonian linearization theorem	47
3. The linearization theorem for abstract moment maps	51
4. Linear torus actions	52
5. The right-hand side of the linearization theorems	56
6. The Duistermaat-Heckman and Guillemin-Lerman-Sternberg formulas	58
Chapter 5. Reduction and applications	63
1. (Pre-)symplectic reduction	63
2. Reduction for abstract moment maps	65
3. The Duistermaat-Heckman theorem	69
4. Kähler reduction	72
5. The complex Delzant construction	73
6. Cobordism of reduced spaces	81

7. Jeffrey–Kirwan localization	82
8. Cutting	84
Part 2. Quantization	87
Chapter 6. Geometric quantization	89
1. Quantization and group actions	89
2. Pre-quantization	90
3. Pre-quantization of reduced spaces	96
4. Kirillov–Kostant pre-quantization	99
5. Polarizations, complex structures, and geometric quantization	102
6. Dolbeault Quantization and the Riemann–Roch formula	110
7. Stable complex quantization and Spin^c quantization	113
8. Geometric quantization as a push-forward	117
Chapter 7. The quantum version of the linearization theorem	119
1. The quantization of \mathbb{C}^d	119
2. Partition functions	125
3. The character of $\mathcal{Q}(\mathbb{C}^d)$	130
4. A quantum version of the linearization theorem	134
Chapter 8. Quantization commutes with reduction	139
1. Quantization and reduction commute	139
2. Quantization of stable complex toric varieties	141
3. Linearization of $[Q, R]=0$	145
4. Straightening the symplectic and complex structures	149
5. Passing to holomorphic sheaf cohomology	150
6. Computing global sections; the lit set	152
7. The Čech complex	155
8. The higher cohomology	157
9. Singular $[Q, R]=0$ for non-symplectic Hamiltonian G -manifolds	159
10. Overview of the literature	162
Part 3. Appendices	165
Appendix A. Signs and normalization conventions	167
1. The representation of \mathbf{G} on $\mathbf{C}^\infty(\mathbf{M})$	167
2. The integral weight lattice	168
3. Connection and curvature for principal torus bundles	169
4. Curvature and Chern classes	171
5. Equivariant curvature; integral equivariant cohomology	172
Appendix B. Proper actions of Lie groups	173
1. Basic definitions	173
2. The slice theorem	178
3. Corollaries of the slice theorem	182
4. The Mostow–Palais embedding theorem	189
5. Rigidity of compact group actions	191
Appendix C. Equivariant cohomology	197
1. The definition and basic properties of equivariant cohomology	197

2. Reduction and cohomology	201
3. Additivity and localization	203
4. Formality	205
5. The relation between $\mathbf{H}_{\mathbf{G}}^*$ and $\mathbf{H}_{\mathbb{T}}^*$	208
6. Equivariant vector bundles and characteristic classes	211
7. The Atiyah–Bott–Berline–Vergne localization formula	217
8. Applications of the Atiyah–Bott–Berline–Vergne localization formula	222
9. Equivariant homology	226
Appendix D. Stable complex and Spin^c -structures	229
1. Stable complex structures	229
2. Spin^c -structures	238
3. Spin^c -structures and stable complex structures	248
Appendix E. Assignments and abstract moment maps	257
1. Existence of abstract moment maps	257
2. Exact moment maps	263
3. Hamiltonian moment maps	265
4. Abstract moment maps on linear spaces are exact	269
5. Formal cobordism of Hamiltonian spaces	273
Appendix F. Assignment cohomology	279
1. Construction of assignment cohomology	279
2. Assignments with other coefficients	281
3. Assignment cohomology for pairs	283
4. Examples of calculations of assignment cohomology	285
5. Generalizations of assignment cohomology	287
Appendix G. Non-degenerate abstract moment maps	289
1. Definitions and basic examples	289
2. Global properties of non-degenerate abstract moment maps	290
3. Existence of non-degenerate two-forms	294
Appendix H. Characteristic numbers, non-degenerate cobordisms, and non-virtual quantization	301
1. The Hamiltonian cobordism ring and characteristic classes	301
2. Characteristic numbers	304
3. Characteristic numbers as a full system of invariants	305
4. Non-degenerate cobordisms	308
5. Geometric quantization	310
Appendix I. The Kawasaki Riemann–Roch formula	315
1. Todd classes	315
2. The Equivariant Riemann–Roch Theorem	316
3. The Kawasaki Riemann–Roch formula I: finite abelian quotients	320
4. The Kawasaki Riemann–Roch formula II: torus quotients	323
Appendix J. Cobordism invariance of the index of a transversally elliptic operator by Maxim Braverman	327
1. The \mathbf{Spin}^c -Dirac operator and the \mathbf{Spin}^c -quantization	327
2. The summary of the results	329

3. Transversally elliptic operators and their indexes	331
4. Index of the operator \mathbf{B}_α	333
5. The model operator	335
6. Proof of Theorem 1	336
Bibliography	339
Index	349
