Co-Founder & VP  
GL CHEMTEC INTERNATIONAL LTD.

The GL CHEMTEC story – A potential, non-conventional, alternative business pathway for entrepreneurial science graduate students

This presentation will outline how GL CHEMTEC INTERNATIONAL LTD. was founded and will examine how it is possible to establish a company in the scientific space in the very earliest stages of a graduate student’s career. We will look at the phases of growth in a small R&D/technology-based organization and discuss what is needed to be successful in the current global economic climate. Potential career opportunities in various sectors of the industry will also be addressed. A high-level overview of select projects will be presented which showcase GL CHEMTEC’s contribution to major technological breakthroughs in both the medical device and pharma/biotech industries. GL CHEMTEC’s future growth plans will be touched upon as an example of possible areas for accelerated expansion for small-medium sized companies in the early Discovery/R&D space.
