Central Ventilation

The table below lists all buildings on the Mississauga campus and the type of filter used in each of the building’s air handling units.

As part of our COVID-19 HVAC strategy, all centralized heating, ventilation, and air conditioning (HVAC) system filters have been replaced with enhanced MERV 13 filters or the highest compatible with the existing HVAC infrastructure.

This is the standard that the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) recommends in the event of an emergency.

To learn more about U of T's approach to classroom ventilation upgrades, review our COVID-19 HVAC strategy and read this U of T news story about how the University is preparing for a safe return to campus.
