

Cody Ross is an LTA Assistant Professor (Teaching) in the Department of Geography, Geomatics, and Environment at UTM. He is also a post-doctoral fellow at Toronto Metropolitan University (TMU) working with the Ontario Ministry of Environment, Conservation, and Parks, and in 2023 will begin an NSERC post-doctoral fellowship at TMU. As a broadly trained geoscientist, the essence of his research is to determine and predict how terrestrial and aquatic systems interact with climate and affect hydrologic response, landscape change, and contaminant transport. His current research involves nutrient mobilization and transport from agricultural watersheds in southern Ontario. His underlying research passions surround the development of conceptual abstractions that facilitate knowledge exchange among distinct environments, revealing details about watershed function and resilience to change.
