Are you looking for a career where you can make business decisions that deliver meaningful social and environmental change?

Do you want to align your value system with your career?

If yes, you need to find a graduate program that fosters integrative thinking by connecting the business and science disciplines.

The University of Toronto Masters of Science in Sustainability Management program is different from any other business or science program offered. It was developed in consultation with leaders and future employers in business, non-profit, academic and government organizations.

The program is unique, because of its focus on developing sustainability managers who can integrate science and management skills to address sustainability challenges.

Position yourself to stand out from your peers -- be ready to take on the jobs that business leaders need.

Expand your area of expertise through a multi-disciplinary approach, where every course is taught through the lens of sustainability.

Collaborate and innovate with classmates from diverse cultural and academic backgrounds.

Develop a strategy to achieve you career goals through:

- professional development workshops
- industry speaker seminars
- networking events
- mock interviews
- and a summer internship

Our world is faced with many challenges. Our climate is changing. Resources are being depleted. Economies are collapsing, resulting in high unemployment and social upheaval.

We need to stop working in silos.

And start working together. So our solutions reflect the whole picture: the economic, social, environmental, and political.

Today, forward thinking business leaders understand that profits and the viability of their business are at risk if how they operate destroys the very resources on which they depend.

We're starting to see action, but we have a long way to go.

90% of business leaders are addressing sustainability issues. And companies that act aggressively benefit the most--by reducing costs, generating new streams of revenue, developing innovative --and profitable --business models and earning a social license to operate through community and stakeholder approval.

They need skilled business leaders with the depth and breadth of knowledge in sustainability management, to propel them forward.

50% of companies develop sustainability reports. But frankly, many companies are concerned their reports lack credibility and their efforts don't go far enough. Why? Because they don't have qualified sustainability managers.

Prepare yourself to make a difference and lead the world towards global sustainability.
