Updated List of Eligible Gas Powered Vehicles by Year

Model Year 2011 and older: Emission cut off, less than or equal to 140.0 CO2 g/km
Model Year 2012 and newer: Emission cut off, less than or equal to 125.0 CO2 g/km

Updated November 2020

A vehicle's emission rating is designated by Natural Resources Canada (NRCAN), Office of Energy Efficiency Fuel Consumption Ratings. If a vehicle does not exist on the pre-approved list below, it will be verified at the [Natural Resources Canada webpage](http://www.nrcan.gc.ca). To determine the g/km of a vehicle on the list, refer to the "CO2 g/km" column provided for the vehicle.

NEW: For model year 2015 onwards, vehicle manufacturers are using an improved testing procedure to determine the fuel consumption ratings of new light-duty vehicles. The new test methods result in higher fuel consumption ratings that are more representative of everyday driving. To help you compare vehicles from different model years, the ratings for 1995-2014 vehicles have been adjusted to reflect the new test methods.
