**NOTES:**

1. Students need to obtain permission from the course instructor to take BIO207H5 without the BIO153H5 prerequisite.
2. If BIO477H5 is not offered in the fourth year of a student's studies, he or she must take an additional 0.5 credit from the recommended 400-level courses.
3. Students intending to take CHM361H5 as one of their fourth year recommended courses must take CHM243H5 as a prerequisite course.
4. All third and fourth year CSC courses have a writing requirement. The recommended course for satisfying that requirement is CSC290H5, but students may substitute a different writing course. If a student wishes to substitute another course to satisfy the writing requirement, the student should consult a Bioinformatics Program Advisor.
5. The combination of (MAT134Y5/MAT135Y5/MAT137Y5/MAT157Y5 and MAT232H5) may be replaced by the combination of (MAT133Y5 and MAT233H5).

## *1 New Course*

<b>CSC415H5: Introduction to Reinforcement Learning</b>
<b>Contact Hours:</b> <i>Lecture: 24 / Tutorial: 12</i>
<b>Description:</b>  Reinforcement learning is a powerful paradigm for modeling autonomous and intelligent agents interacting with the environment, and it is relevant to an enormous range of tasks, including robotics, game playing, consumer modeling and healthcare. This course provides an introduction to reinforcement learning intelligence, which focuses on the study and design of agents that interact with a complex, uncertain world to achieve a goal. We will study agents that can make near-optimal decisions in a timely manner with incomplete information and limited computational resources.  The course will cover Markov decision processes, reinforcement learning, planning, and function approximation (online supervised learning). The course will take an information-processing approach to the concept of mind and briefly touch on perspectives from psychology, neuroscience, and philosophy.

### UTM111H5: utmONE: Tools of the Trade

**Title:**

utmONE: Special Topics at ~~Tools of~~ the Intersection of Science and Social Science ~~Trade~~

**Description:**

**Previous:** This course is an introduction to the common problem-solving tools used in the sciences and social sciences . It is designed to address the fundamental skills needed for comprehension and effective communication in these areas. The skills being addressed may include critical analysis of texts ( primary literature, review papers, textbooks ) , use of databases to gather, manipulate and visualize data; interpretation and presentation of data; information gathering and writing skills (lab reports, critical essays) ; and oral presentations. Specific examples will be drawn from a variety of current research topics in both the sciences and social sciences. As part of this course students will participate in a series of tutorials that will help them build foundations for academic success (such as understanding the value of higher education, developing a growth mindset, and finding passion) . [ 24L, 12T ]

**New:**
