

ENROLMENT NOW OPEN!

INSPIRE

Interdisciplinary Summer
Program in Research
and Entrepreneurship

*Want to jump start your graduate research? Interested in a career in biotech?
Curious about what it takes to build your own start-up?*

The **INSPIRE Scholars Program** introduces students to the cutting-edge biophysical techniques that are reshaping our understanding of the biological world. This immersive, interdisciplinary program is designed to prepare students for graduate school and beyond.

The theme for the 2023 INSPIRE Scholars program will be **21st Century Biophysical Techniques**. Program runs **June 19-30, 2023**.

WHAT TO EXPECT?

This two-week, immersive curriculum will provide a crash-course in an array of biophysical techniques, both experimental and computational, with “hands-on training modules” directly within the research labs of scientists developing and applying these tools.

WHO SHOULD APPLY?

This program is primarily geared toward third and fourth year undergraduate students considering pursuing graduate school in Physics, Chemistry, or other fields of Quantitative Biology, as well as incoming U of T graduate students in Physics, Chemistry, Bioengineering, Biochemistry, etc. However, exceptional second year undergraduates with experience in physics/chemistry/biochemistry are also encouraged to apply.

We are committed to fostering an environment of diversity and inclusion. We especially welcome applications from candidates who identify as Indigenous, Black, or racially visible (persons of colour).

FEES & REGISTRATION

Acceptance into the program is expected to be highly competitive. If admitted, students will be provided with a tuition fellowship to cover the costs of all instruction and laboratory fees. Students will be responsible for the additional costs of room and board should this be required.

*The application period will close at the end of the day on March 6, 2023. Results will be announced by April 3, 2023.
